

## OpenPlan Admin Pilot Readiness Proof Packet

\_Date: 2026-05-01\_

\_Last refreshed: 2026-05-10\_

\_Status: Buyer-safe proof export for supervised pilot and managed-service review\_

\_Audience: rural RTPA, county, tribe, transportation commission, or consultant buyer diligence\_

### Buyer-Safe Summary

OpenPlan is ready to discuss as a supervised planning workbench with an Apache-2.0 open-source core and optional Nat Ford managed hosting, onboarding, implementation, support, and planning services.

This packet does not claim that OpenPlan is a fully self-serve municipal SaaS, a validated behavioral forecasting platform, a complete legal/compliance automation system, a grant award prediction product, or an autonomous AI planning product.

The static sales packet and the Admin Pilot Readiness export now reuse the same final-checklist sync, release-proof artifacts, and caveat list so buyer-facing diligence does not drift from the operator surface.

What has been proven for this release-to-sale posture:

- â€ release-candidate checks across tests, lint, build, production health, audit, and public demo preflight;
- â€ authenticated workspace and cross-workspace isolation behavior in local synthetic smoke;
- â€ RTP/report packet creation, artifact generation, and release-review navigation;
- â€ grants, funding awards, reimbursement, closeout, and RTP posture write-back;
- â€ engagement public intake, moderation, public feedback publication, and report handoff;
- â€ analysis/model-run output linked into scenarios and generated report artifacts;
- â€ one seeded project record reused across RTP, grants, engagement, modeling evidence, reports, map, Data Hub, and aerial evidence;
- â€ supervised request-access, reviewer triage, pilot workspace provisioning, owner invitation, and invited-owner acceptance;
- â€ production Admin Operations access for the configured reviewer, with the service-lane intake unlocked and no prospect row capture;
- â€ current billing posture with an explicit no-fresh-paid-canary waiver; and
- â€ operator backup/restore procedure, completed staging restore drill, and managed-hosting service schedule language.

### Proof Snapshot

| Area | Status | What the evidence proves | Source |
|------|--------|--------------------------|--------|
|------|--------|--------------------------|--------|

Release candidate baseline PASS pnpm test, pnpm lint, pnpm build, production health, production audit, and public demo preflight all passed for the May 1 RC gate.

docs/ops/2026-05-01-openplan-rc-proof-log.md

Public demo preflight PASS No-auth checks cover health, request-access page availability, protected billing-readiness access, Mapbox/CSP posture, and no token printing.

openplan/docs/ops/2026-04-27-public-demo-preflight-proof.md;  
docs/ops/2026-05-01-openplan-phase0-proof-repair.md  
Admin Pilot Readiness surface PASS The readiness parser reads line-item PASS: evidence,  
/admin/pilot-readiness was recaptured on desktop/mobile, and the export now shares  
final-checklist/release-proof sections with this static packet.  
docs/ops/2026-05-01-openplan-phase0-proof-repair.md;  
docs/ops/2026-05-01-openplan-ui-ux-watch-recapture.md;  
openplan/src/lib/operations/pilot-readiness-packet.ts  
Workspace isolation PASS Two synthetic users could access their own workspace project URLs  
and were blocked from the other workspace, with session continuity after denial.  
docs/ops/2026-05-01-openplan-local-workspace-url-isolation-smoke.md  
RTP/report workflow PASS Local rendered smoke confirms RTP cycle creation, board-packet  
creation, artifact generation, registry packet navigation, and release-review anchor  
landing. docs/ops/2026-05-01-openplan-local-rtp-release-review-smoke.md  
Grants/funding workflow PASS Local rendered/API smoke confirms funding need, awarded  
opportunity, committed award, project RTP posture write-back, obligation milestone, paid  
reimbursement invoice, closeout, and funded/reimbursed posture.  
docs/ops/2026-05-01-openplan-local-grants-flow-smoke.md  
Engagement handoff PASS Local rendered/API smoke confirms public feedback intake, staff  
moderation, public publication, handoff report provenance, HTML artifact generation, and  
source-context traceability.  
docs/ops/2026-05-01-openplan-local-engagement-report-handoff-smoke.md  
Analysis/report linkage PASS Local rendered/API smoke confirms corridor run-template model,  
managed run launch, persisted source analysis output, scenario attachment, Analysis Studio  
deep link, report linkage, HTML artifact, and source-context traceability.  
docs/ops/2026-05-01-openplan-local-analysis-report-linkage-smoke.md  
Phase 1 shared spine PASS Local API/rendered smoke confirms one seeded NCTC project ID is  
reused across RTP, grants, engagement, scenario/analysis runs, county-run modeling evidence,  
reports, map, Data Hub, and aerial evidence packages without duplicate project creation.  
docs/ops/2026-05-01-openplan-local-spine-smoke.md  
Admin/support onboarding flow PASS Local rendered/API smoke confirms public intake,  
allowlisted reviewer triage, provision-only-after-contacted gating, pilot workspace  
creation, owner invitation, review-event audit trail, and invited-owner acceptance.  
docs/ops/2026-05-01-openplan-local-admin-support-flow-smoke.md  
Production Admin Operations access PASS Production authenticated browser smoke confirms the  
configured reviewer can load /admin/operations, see the service-lane intake surface  
unlocked, and avoid triage/provision actions or prospect row capture during proof.  
docs/ops/2026-05-01-openplan-production-admin-operations-authenticated-smoke.md  
Billing posture PASS with explicit waiver Billing is positioned as historical live payment  
evidence plus current non-money-moving proof. No fresh same-cycle paid checkout canary is  
claimed. docs/ops/2026-05-01-openplan-billing-current-cycle-waiver-proof.md  
Managed hosting posture Buyer-reviewable template The service schedule defines scoped  
managed-hosting responsibilities, support targets, backup/restore fields to fill, and  
out-of-scope items before signature.  
docs/sales/2026-05-01-openplan-managed-hosting-service-schedule.md  
Backup/restore posture PASS The operator procedure names durable state, backup cadence,  
restore decision gates, staging-first posture, validation, and customer communication  
boundaries. A dedicated staging Supabase project was created, migrated, restored from

private production schema/public-data dumps, validated, and retired.  
openplan/docs/ops/2026-05-01-openplan-backup-restore-procedure.md;  
docs/ops/2026-05-01-openplan-restore-drill-staging-supabase.md  
Final checklist / managed support synchronization PASS The final pilot-readiness checklist,  
managed-support proof map, county-run manifest proof, and modeling evidence export proof now  
travel with both the Admin export and static sales packet.  
docs/ops/2026-05-10-openplan-final-pilot-readiness-smoke-checklist.md;  
docs/sales/2026-05-10-openplan-managed-support-proof-map.md;  
docs/ops/2026-05-10-openplan-county-run-manifest-proof-ui.md;  
openplan/docs/ops/2026-05-10-openplan-modeling-evidence-export-proof.md;  
openplan/src/test/pilot-readiness-export-packet.test.ts

#### Final Pilot-Readiness Checklist Sync

â€¢ Checklist: docs/ops/2026-05-10-openplan-final-pilot-readiness-smoke-checklist.md

â€¢ Verdict: PASS for a supervised pilot-readiness conversation; not a launch certificate for a finished planning suite.

â€¢ Operator instruction: Use this sync block before buyer reliance: confirm the final checklist, exported Admin Pilot Readiness packet filenames, and latest proof-lane artifacts still match the current caveats.

â€¢ Supervised-onboarding caveat: Onboarding is a supervised implementation step: no instant public workspace activation, no broad self-serve municipal SaaS claim, and no outbound reliance without human review.

#### Exported proof packet filenames

â€¢ docs/sales/2026-05-01-openplan-admin-pilot-readiness-proof-packet.md

â€¢ docs/sales/2026-05-01-openplan-admin-pilot-readiness-proof-packet.html

â€¢ docs/sales/2026-05-01-openplan-admin-pilot-readiness-proof-packet.pdf

#### Latest proof lanes synchronized from the final checklist

â€¢ Managed support diligence: docs/sales/2026-05-10-openplan-managed-support-proof-map.md

- Role: Connects managed hosting, onboarding, support, backup/restore, billing, and pilot closeout claims to proof.

- Caveat: Buyer-specific reliance checks and per-engagement operations terms still need operator completion before contracting.

â€¢ County-run manifest proof: docs/ops/2026-05-10-openplan-county-run-manifest-proof-ui.md

- Role: Keeps county-run evidence, source context, and caveats visible for pilot diligence.

- Caveat: County-run output is evidence packaging, not validated forecasting or autonomous decision support.

â€¢ Modeling evidence exports:

openplan/docs/ops/2026-05-10-openplan-modeling-evidence-export-proof.md

- Role: Carries modeling caveats and source context into report and RTP export paths.

- Caveat: Behavioral-onramp KPIs remain behind the proven SQL/RPC caveat gate; no validated behavioral forecasting claim is made.

â€¢ Release proof synchronization: openplan/src/test/pilot-readiness-export-packet.test.ts

- Role: Guards the Admin Pilot Readiness export against drift from Command Center release-proof copy and the final smoke checklist.

- Caveat: Internal packet synchronization does not replace fresh smoke reruns after behavior changes.

## Release Proof Packet Alignment

OpenPlan is inspectable as an Apache-2.0 planning workbench plus Nat Ford managed hosting, onboarding, implementation, support, and planning services.

Sell the current wedge as supervised planning workbench support for rural RTPA/county workflows, not broad self-serve municipal SaaS.

## Required caveats

â€¢ No fresh same-cycle paid canary is claimed; current billing proof is waiver/non-money-moving posture.

â€¢ Onboarding remains a supervised implementation step, not instant self-serve activation; buyer use requires operator review before reliance.

â€¢ RPO/RTO commitments are filled per managed-hosting engagement, not promised globally here.

â€¢ Modeling outputs support planning review only inside the current proof boundary; no validated behavioral forecasting claim is made.

â€¢ OpenPlan is not sold as legal-grade LAPM/compliance automation or autonomous AI planning, and no grant award prediction claim is made.

## Proof artifacts synchronized with Command Center

â€¢ Gates: Release gates are collected and traceable. Source:

docs/ops/2026-05-01-openplan-release-to-sale-plan.md

- Supports: Sale readiness: names the current gate evidence operators may cite for the supervised offer.

- Operator check: Use it to confirm a buyer or pilot claim maps to a PASS gate before it appears in demo copy, SOW language, or a readiness packet.

- Caveats carried: Supervised onboarding

(docs/ops/2026-05-10-openplan-final-pilot-readiness-smoke-checklist.md); Modeling proof

boundary (docs/ops/2026-05-08-openplan-modeling-caveat-kpi-sql-gate-proof.md); No

legal/autonomous AI claim (docs/ops/2026-05-01-openplan-known-issues-register.md)

â€¢ Packet: Admin Pilot Readiness is the operator-facing packet check. Source:

docs/sales/2026-05-01-openplan-admin-pilot-readiness-proof-packet.md

- Supports: Pilot readiness: turns smoke status and source documents into a reviewable operator packet.

- Operator check: Use it immediately before a pilot demo to verify PASS lanes have named source docs and every pending/failing lane has a follow-up owner.

- Caveats carried: Billing proof waiver

(docs/ops/2026-05-01-openplan-billing-current-cycle-waiver-proof.md); Supervised onboarding

(docs/ops/2026-05-10-openplan-final-pilot-readiness-smoke-checklist.md); Per-engagement

hosting terms (docs/ops/2026-05-01-openplan-known-issues-register.md)

â€¢ Caveats: Sales language must stay inside named caveats. Source:

docs/ops/2026-05-01-openplan-known-issues-register.md

- Supports: Sale readiness: keeps public, pricing, and buyer-facing language inside the current proof boundary.

- Operator check: Use it as the stop-list before sharing examples, pricing language, implementation scopes, or managed-hosting commitments.

- Caveats carried: Billing proof waiver

(docs/ops/2026-05-01-openplan-billing-current-cycle-waiver-proof.md); Supervised onboarding

(docs/ops/2026-05-10-openplan-final-pilot-readiness-smoke-checklist.md); Per-engagement

hosting terms (docs/ops/2026-05-01-openplan-known-issues-register.md); Modeling proof boundary (docs/ops/2026-05-08-openplan-modeling-caveat-kpi-sql-gate-proof.md); No legal/autonomous AI claim (docs/ops/2026-05-01-openplan-known-issues-register.md)

â€ Next action: Inspect readiness, then review intake positioning. Source: docs/sales/2026-05-01-openplan-buyer-safe-caveat-sheet.md

- Supports: Sale and pilot readiness: gives the operator sequence after proof review, before external use.
- Operator check: Use it as the final supervised-readiness walk-through: readiness packet, request-access language, examples, then buyer-safe caveat sheet.
- Caveats carried: Billing proof waiver (docs/ops/2026-05-01-openplan-billing-current-cycle-waiver-proof.md); Supervised onboarding (docs/ops/2026-05-10-openplan-final-pilot-readiness-smoke-checklist.md); Modeling proof boundary (docs/ops/2026-05-08-openplan-modeling-caveat-kpi-sql-gate-proof.md); No legal/autonomous AI claim (docs/ops/2026-05-01-openplan-known-issues-register.md)

## What Nat Ford Should Validate During Buyer Onboarding

Before a rural RTPA/county buyer relies on the pilot workspace, Nat Ford should validate the buyer-specific operating facts below.

### Onboarding validation   Why it matters

Name one workspace owner and support contact(s). Keeps access, triage, and issue escalation accountable.

Select the first workflow: RTP/report, grants/funding, engagement handoff, analysis/report linkage, county-run evidence packaging, or managed-hosting setup. Prevents a buyer conversation from expanding into unsupported full-suite claims.

Classify data sensitivity: public, internal, confidential, or mixed. Determines what data belongs in OpenPlan, what should remain outside, and whether enhanced terms are needed.

Confirm the managed-hosting service schedule fields. Support targets, backup/restore posture, billing posture, and any enhanced SLA terms must be filled before signature.

Re-run the relevant workspace-specific smoke after setup. The May 1/May 10 proof is platform/release evidence; each pilot still needs its own scoped acceptance check.

Confirm Mapbox, Supabase, Vercel, Stripe, and model-provider posture for the chosen workflow. Third-party dependencies are part of the hosted operating path and may affect procurement or availability expectations.

Decide whether procurement needs a fresh paid checkout canary. The current packet explicitly waives same-cycle money-moving proof.

Review AI/modeling output caveats before external reliance. AI-assisted and modeling outputs are planning-support materials, not autonomous or certified decisions.

Confirm client official-record retention outside OpenPlan. OpenPlan exports and records do not replace public-records, legal-hold, or official archive duties.

### Implementation-Specific Items Still To Scope

These items remain real work or engagement-specific decisions, not release-wide guarantees:

â€ buyer-specific data loading, cleanup, geocoding, GIS integration, and source-document

review;

• SSO, private cloud, agency-cloud deployment, custom security review, or enhanced support/SLA terms;

• formal RPO/RTO commitments beyond the signed managed-hosting schedule;

• future quarterly restore drills for later production milestones;

• fresh same-cycle paid checkout proof if the buyer or procurement reviewer requires it;

• calibrated or certified behavioral-demand modeling and broader ActivitySim/MATSim readiness;

• no release-wide complete LAPM/legal/compliance automation, grant award prediction, certified grant scoring, or official legal sign-off;

• custom reports, integrations, migrations, or planning services beyond the scoped SOW; and

• aerial/field evidence workflows beyond the selected implementation scope.

## Buyer-Safe Language

Use:

OpenPlan supports supervised planning workflows with evidence traceability and human review.

Use:

OpenPlan is ready for scoped pilots and managed-service engagements where the first workflow, data posture, support path, and proof boundary are agreed up front.

Use:

Managed hosting and implementation are service wrappers around the Apache-2.0 open-source core.

Avoid:

Avoid claiming OpenPlan is fully self-serve municipal SaaS.

Avoid:

Avoid claiming OpenPlan replaces planners, engineers, attorneys, grant writers, or agency review.

Avoid:

Avoid claiming OpenPlan predicts grant awards or provides certified grant scoring.

Avoid:

Avoid claiming billing was freshly re-proven with a paid checkout in this release cycle.

#### Packet Verdict

PASS for buyer-safe packaging: this packet makes the current proof posture readable for a supervised pilot or managed-service sale while preserving the explicit limits around production guarantees, billing proof, modeling, compliance, AI, backup/restore, and buyer-specific onboarding.
